Phnom Penh, Cambodia

Education

Institute of Technology of Cambodia

Engineering degree in Data Science
2021-2026

Kampong Trabek High School

2018-2021

Skills

- Programming: Python, SQL, R
- Data Analysis & Statistics: Data Mining, EDA
- Machine Learning and Deep Learning
- Data Engineering & ETL Processes, PostgreSQL, MySQL
- Libraries & Frameworks
Pandas, NumPy, Scikit-learn, PyTorch
- Data Visualization & BI Tools
Matplotlib, Seaborn
Power BI (Dashboards, DAX Functions)

Other skills:

- Project Management, Problem Solving, Adaptability, Collaboration

Language

Khmer: native

English: Intermediate

References: Available upon request

PHORN SREYPOV

Profile

I am a fifth-year Data Science student with research experience supporting a PhD project on electrical load forecasting under the EDC-AFD-EU platform. My work involves collecting, cleaning, and analyzing Cambodia's national power system data, conducting exploratory data analysis, and contributing to the development and evaluation of machine learning and time-series forecasting models. I am passionate about applying data-driven solutions to real-world energy challenges while building expertise in predictive analytics, statistical modeling, and research collaboration.

Experience

● Data Scientist

May 2026- Present

Electricité du Cambodge (EDC)

- Designed a hybrid feature selection system (Pearson, SHAP, Mutual Information) that streamlined model inputs and boosted forecasting efficiency
- Developed a meta-stacking ensemble model using temporal cross-validation for reliable load predictions
- Built and deployed a full-stack forecasting platform (FastAPI + React + PostgreSQL + Docker) to support power system planning

● Data Analyst Intern

Aug 2025 - Oct 2025

General Secretariat of National Council for Minimum Wage

- Developed and executed ETL pipelines using Python and SQL, transforming raw data into analysis-ready datasets and reducing manual data preparation time
- Conducted data analysis on structured datasets to uncover key business insights, supporting data-driven decision-making
- Built 3 interactive Power BI dashboards adopted by the research team for stakeholder reporting

Project

Applied NLP & Machine Learning with Email Spam

- Built a spam classifier using English email text data. Applied NLP techniques and trained multiple models; logistic regression achieved the best accuracy of 98.5%.

Fraud Detection in Financial Transactions, 2024

- Applied Logistic Regression, Decision Tree, and Random Forest to detect fraud in banking transactions. Used SMOTE and other resampling techniques to address data imbalance.

Volunteering

- Volunteer Trainer – Digital Literacy Program | Ministry of Education
Trained 300+ students from 4 high schools on digital tools, online safety, data security.(Mar 2025 – Present)
- Volunteered as a Mathematics Tutor, teaching junior students in the Foundation Year at ITC (2022–2023).
